

水下化学药剂注入计量阀

水下化学药剂注入计量阀 (Chemical Injection Metering Valve / Chemical Throttle Valve/ Subsea Chemical Injection Delivery System, 简称为CIMV / CTV / SCIDS, 以下统称CIMV)是一款用于精确控制和计量注入水下生产系统的各类化学药剂 (如甲醇、乙二醇、防垢剂等) 的设备。通过精确控制输送到水下生产系统的化学药剂流量, 防止管线内产生水合物、结蜡、结垢等, 对保障水下生产系统的正常功能和长期稳定运行具有重要意义。开发了高流量、低流量两款CIMV, 利用具有完全自主知识产权的固定节流加可节流冗余计量的技术, 并通过权威第三方挪威船级社 (DNV) 进行型式认证, 保证其在海底低温、内外部高压、周期暗流振动和冲击等恶劣工况下, 可以满足30年的使用寿命和良好的计量精度。

Chemical Injection Metering Valve (CIMV)

Chemical Injection Metering Valve (CIMV), also called as Chemical Throttle Valve (CTV) or Subsea Chemical Injection Delivery System (SCIDS), is a device for the precise control and metering of various chemicals (such as methanol, MEG, scale inhibitors, etc.) injected into subsea production system. Precise control of the chemicals flow to subsea production system is crucial for preventing the formation of hydrates, wax, and scales in pipelines, which is vital for ensuring the normal function and long-term stable operation of subsea production system. Two versions of CIMV, high flow rate and low flow rate respectively, were developed utilizing redundant metering technologies which are 100% proprietary intellectual property. The CIMVs have been certified by the authoritative third party DNV, which guarantees 30 years service life and accurate metering precision under harsh conditions such as low temperatures at the seabed, high internal and external pressure, etc.
